Readmission to Prior Hospital 16.7%  
Average Age 71 Years Old  

Hours of Therapy Per Day 3 Hours  
216 Patients Served  
2018
Functional Independence Measure (FIM) measures change in function from the time of admission to discharge. The FIM includes information on how independent our patients are in activities of daily living, such as bathing, dressing, feeding and walking.
Patient Satisfaction is based on the reported overall satisfaction of our patients during their stay. Ratings are converted to a 100-point scale based on patient responses.
